

Magic Garden

Contents:

10 Cardboard pieces

Plastic tray

4 Liquid packs

With 4 easy steps you will begin to be amazed by the crystal formations you create with the **Magic Garden**.

1. First, form your mountain by folding along the scores on the largest cardboard piece and placing it in the corresponding space in your tray.
2. Assemble the trees by sliding a top piece and bottom piece together. You may want to fold down some of the branches in order to allow the crystals to make a fully dimensional tree. Stand the trees in the 2 large circular wells.
3. Place the shrubs in the corresponding wells, referring to the picture below for help.

4. Carefully open each of the liquid packs and pour the liquid into the tray. Distribute the liquid so that all wells are nearly full.

Now sit back and in minutes you will begin to see crystals forming. Your crystals will be finished growing in approximately 8 hrs.

Congratulations! You have created your very own **Magic Garden**.
